SKILLMATCH AI — LEAN CANVAS

AICTE Machine Learning Program | SDG 8: Decent Work and Economic Growth

PROBLEM

• Students struggle to connect existing skills to realistic entry-level roles.
• Career advice is often generic and hard to act on.
• Learners may not know which skills to improve.

Alternatives: job portals, career counsellors, spreadsheets, generic chatbots.

SOLUTION

• Let users select or type skills.
• Rank relevant role profiles using TF-IDF + cosine similarity.
• Show core requirements and suggested learning gaps.
• Export results to CSV.

UNIQUE VALUE PROPOSITION

A simple, explainable first-step career exploration tool that turns a learner's current skills into role ideas and actionable learning gaps.

UNFAIR ADVANTAGE

Transparent matching logic, easy-to-edit role dataset, and a lightweight student-built prototype. No defensible moat yet; validate with real users and data.

CUSTOMER SEGMENTS

Primary: college students and recent graduates exploring technology careers. Secondary: placement cells, career mentors, beginner learners.

KEY METRICS

• Number of completed skill searches
• User-rated usefulness
• Recommendation relevance from user feedback
• CSV exports and repeat usage

CHANNELS

College demonstrations, student communities, placement cells, LinkedIn posts, GitHub repository.

HIGH-LEVEL CONCEPT

Skill-based career matching, like a transparent role finder for learners.

EARLY ADOPTERS

MCA/BCA/B.Tech students, self-taught learners, and students preparing for internships or entry-level roles.

VALIDATION PLAN

Ask 5–10 students to try the demo and rate whether top roles fit their skills. Revise the dataset using feedback.

COST STRUCTURE

Development time; internet and laptop; hosting (optional); data collection and validation; future maintenance.

REVENUE STREAMS

Current prototype: no revenue. Possible future options: institution licensing, premium learning roadmaps, or sponsored course links; validate demand first.

Note: This canvas describes a prototype concept. Revenue, demand, and user outcomes have not yet been validated.
